

Instructions to Install EES

Prepared by J. M. Cimballa. Latest update: January 07, 2015

1. In Angel, go to the [EES](#) folder on the [Lessons](#) tab.
2. Click on each of the files, and download them to your computer. *Note:* Remember where the files are being downloaded.
3. Go to the folder (directory) where you downloaded the files. [I use [Windows Explorer](#) to see my folders – you are welcome to use [My Computer](#) or whatever other means you have to get to the downloaded files.]
4. Double click on the setup (installation) file, [setup_ees_.....exe](#) and follow the prompts, as usual. *Note:* Remember where EES is being installed on your computer (typically [c:\EES32](#) or something similar). It should create an executable file called [EES.exe](#) in that directory.
5. Copy the file [ees.dft](#) from the folder where you downloaded it to the folder where the program is being installed. This file is a kind of license file that is necessary in order to run EES.
6. Now you are ready to run EES. You can run it by double clicking on the [EES.exe](#) file or by searching for it in Windows Start.
